Performance Tracking: More Knowledge For More Success

Hatz Digital Solutions

Perfectly schedule machines

Avoid unplanned machine downtime

Protect machines from theft and third-party use

Digitize your machine fleet simply and intuitively

Performance Tracking boosts your machine fleet to the next level. Structured machine usage information helps you maximize the efficiency, productivity and profitability of your business.

With real-time transmission of engine operating states, maintenance recommendations, load profiles, geofencing and over-the-air updates for new functionalities, you can take your machine fleet to the next level with Performance Tracking. Users benefit from digital features for compact machines that were not previously available in this machine class. Thanks to the AEMP 2.0 standard interface, Performance Tracking can be seamlessly linked to any existing fleet management solution. This is how you monitor your entire fleet in one software solution.

For users without existing fleet management software, the Hatz IoT Dashboard offers an all-in-one package with the corresponding integrated functionality.

Digital Services That Make Machines Even Better

Want to try digitizing machines and engines on a small scale first? Or do you want to connect your entire fleet to the cloud right away? Both options are possible with our Digital Solutions packages.
